Surface Pumps for Flood Irrigation

Water intensive crops like Rice, Sugarcane and Soya require flooded soil for its growth. For such water intensive crops, flood irrigation through high discharge solar pumps is ideal.

Surface Pumps for Livestock Watering

It is expensive to run power lines across long distances to provide electricity to pumps that provide water for livestock. An ideal solution is a solar pumping system as it eliminates the need for electric lines and delivery of water is guaranteed.

Submersible Pumps for Drip Irrigation

Where there is water scarcity, using a solar pumping system coupled with drip irrigation systems can increase water saving by 70% and increase yield by 150% for a variety of crops.

Submersible Pumps for Drinking Water

Solar pumps are a quick and efficient way to distribute water to communities where households rely on water that is manually drawn from a well.

Pool Pumps for Swimming Pools

Water filtration needs of residential and commercial pools are met by using solar pumps. This means there is zero electricity cost and significant savings.

Submersible Pumps for Sprinkler Systems

Crops that are grown closely together such as cereals, pulses, wheat, etc. benefit from sprinkler systems powered by solar pumps. This results in upto 55% of water saving and 100% savings on electricity costs.

About Rotomag

Rotomag group is globally recognized for the manufacture of high performance motors, gearboxes and solar pumps. Incorporated in 1992, the Rotomag group has 3 companies and 5 brands. Rotomag, the flagship company of this group manufactures DC motors, gearboxes and solar pumps. Rotomotive in collaboration with Motive, Italy manufactures AC motors and gearboxes. Rotodrive a division of Rotomotive manufactures drives for electric vehicles and Magtor in collaboration with Magnetic, Italy manufactures servo motors and drives.

Manufacturing

Our world class manufacturing facilities are spread over 1.6 lakh sq. ft. with a capacity to manufacture 28000 motors and 5000 pumps per month.

Key processes like controlled magnetizing, waterproof encapsulation, trickle impregnation, brazing, resiglass branding, dynamic balancing and assembly enable us to build product reliability during the manufacturing stage.

Inhouse state of the art R&D and QA ensures that every new product that is developed exceeds international standards of performance and quality.

Automatic testing facilities for solar pumps and solar PV simulators push our pumps to the limits of their performance and ensure that pumps meet the specifications laid down by our clients.

ISO 9001:2015

ISO 14001:2015

OHSAS 18001:2007

Milestones

Development of 1HP DC surface pumps

Development of BLDC submersible pumps begins

BLDC submersible pumps developed and approved by EQDC

Remote monitoring unit to view real time pump performance developed.

7.5HP and 10HP DC submersible pumps developed.

Won the IPF product excellence award.

New dedicated manufacturing facility for pumps.

New rugged series of controller and pump developed.

Helical rotor pump and Open well pump.

AC pumps launched.

Unique Features of Rotosol Solar Pumps

Unique features of Rotosol Controllers

Software and Apps

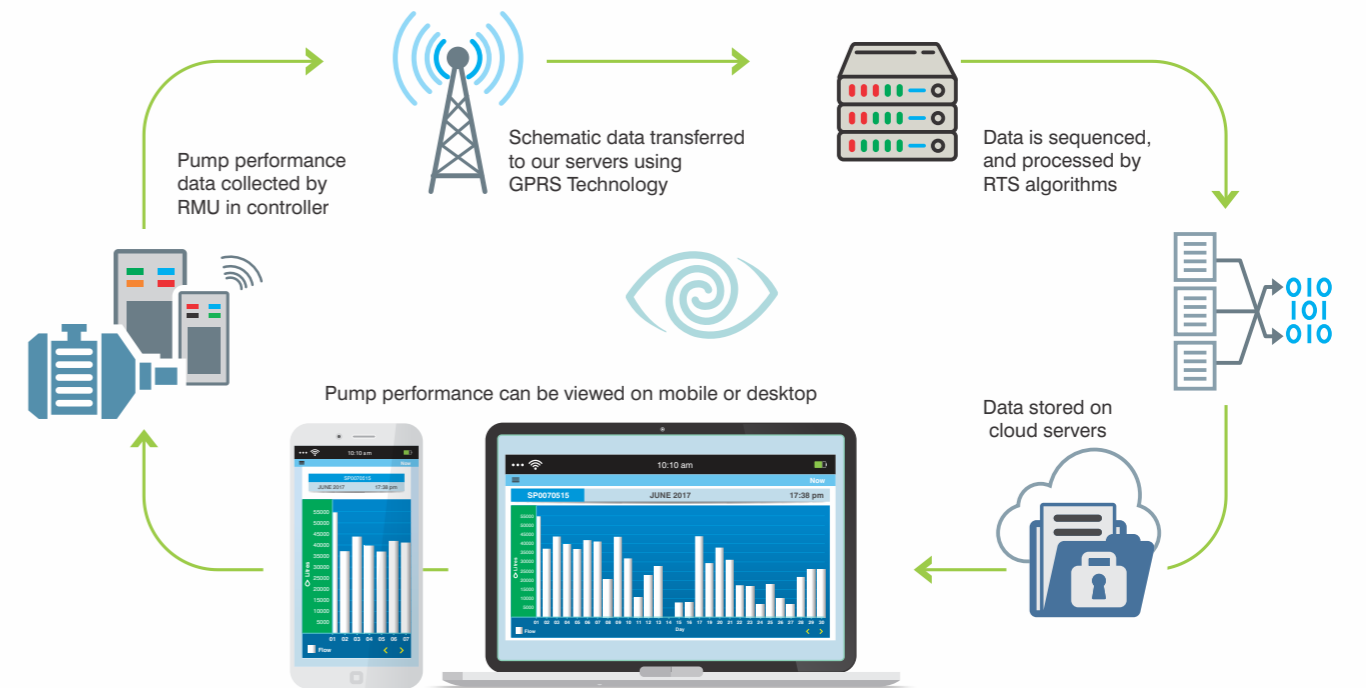

Pump Selector | Select the right pump to suit your needs

The pump selector is an online app that selects the best pump based on the input of a few site parameters.

Pump Eye | Monitor your pump performance

The pump eye provides real time data on pump performance and status of either single or multiple installations. Data can be compiled into reports for performance appraisal. The pump eye is available on desktop and as a mobile app.

Flodesk

This software empowers service personnel to provide prompt and efficient after sales support to customers. Right from installation, the software holds the service history of a pump which enables our service team to map out maintenance trends. This allows us to continuously improve on our product and on end user training.
